Professional Summary

Innovative Machine Learning Engineer and AI Specialist dedicated to designing and deploying advanced artificial intelligence solutions. Engineered a custom AI coding assistant (Claude clone) from scratch, featuring a novel neural network architecture built independently of commercial APIs for automated code generation and analysis. Possesses a strong foundation in C++ optimization and mathematical modeling, seamlessly translating theoretical models into high-performance systems. Highly skilled in integrating diverse Large Language Models (OpenAI, Claude, Gemini) and engineering end-to-end ML pipelines to drive automated analysis and AI-driven decision-making processes.

Technical Skills

AI & ML	Supervised & Unsupervised Learning, Deep Learning, Generative AI, LLM Integration (OpenAI, Claude, Gemini API).
Data Science	Python (Pandas, NumPy, Scikit-Learn), R Language, C++ CPLEX Optimization, SQL, Exploratory Data Analysis (EDA).
Architecture	PostgreSQL, MySQL, MongoDB, Data Cleaning, Feature Engineering.
Cloud & Tools	Git, GitHub, Docker, Kubernetes, Supabase, Firebase, FastAPI, n8n.

Professional Experience

Dec 2025–Present	Software Engineer Full Stack Engineer Full Stack Developer Intern , <i>Alphatech Enterprises</i> , Dubai, UAE (Remote) - Developed scalable web and mobile applications using Flutter, Fastify, MongoDB, Azure, Docker, and Laravel. - Built and optimized APIs, databases, and cloud deployment workflows to enhance performance and reliability. - Promoted from Intern to Software Engineer within 7 months.
May 2026–Jun 2026	Data & Business Analyst (Freelance) , <i>PgBee</i> , Trivandrum, India (Remote) - Conducted rigorous data science and business analysis utilizing R and SQL to evaluate regional expansion opportunities based on historical datasets. - Engineered data pipelines to aggregate competitor benchmarks and target demographics, feeding insights into strategic growth models. - Formulated KPI-driven evaluation frameworks and predictive metrics to track, monitor, and assess location-based market demand.

Data Science & AI Projects

2026	AURA: AI-Driven Resilience Ecosystem <i>Satwa '26 National Hackathon Winner</i> GitHub Repo - Architected a resilience-focused ecosystem utilizing IoT telemetry and Supervised Machine Learning algorithms for real-time anomaly detection. - Secured First Prize at the national-level Satwa '26 Hackathon by deploying a high-performance FastAPI backend integrated with a predictive ML pipeline. - Utilized Python and Pandas for extensive data preprocessing, training models to identify critical operational thresholds and automate disaster response.
Nov 2024–Feb 2025	Tessa AI Figma Plugin <i>Startup AI Integration Project</i> GitHub Repo - Developed an intelligent Figma plugin integrating Model Context Protocol (MCP) to securely extract and transmit design metadata to a custom analytical backend. - Leveraged diverse Large Language Models (OpenAI API, Claude, Gemini) and prompting techniques to analyze design inputs and automatically generate user personas. - Interpreted UI/UX patterns utilizing generative ML principles, producing detailed behavioral analysis reports to streamline user research for product teams.

- Ongoing **E-Commerce Predictive Analytics** | *Machine Learning Pipeline*
GitHub Repo
- Developing an end-to-end e-commerce pipeline heavily focused on **Machine Learning (30%)**, **Deep Learning (20%)**, and **Data Science (30%)**.
 - Utilizing Python to engineer predictive modeling algorithms forecasting seasonal inventory demands and customer churn cycles.
 - Training robust regression and classification models to deeply analyze customer purchasing behavior, enabling highly targeted, data-driven segmentation.

Education

- Aug 2023–
Mar 2027 **Bachelor of Technology (B.Tech) in Industrial Engineering**
College of Engineering Trivandrum (CET), Trivandrum, India
- *Academic Laboratory Focus:* Data Analysis using R, C++ CPLEX Optimization, Advanced Statistical Analysis, Operational Research.
 - *Relevant Coursework:* SQL Database Management, Computer Programming, Object-Oriented Programming (OOP), Statistics.
- Jun 2020–
Mar 2022 **Higher Secondary Education (Computer Science)**
GHSS Punalur, Punalur, India
- *Relevant Coursework:* C++, Data Structures & Algorithms, Database Management Systems (DBMS), SQL.

Leadership & Achievements

- 2026 **Hackathons:** First Prize Winner (Satwa '26 National Hackathon for ML-driven IoT solution) & 1st Runner-Up (Coderecet x Armada Hackathon 2026).
- 2024–2026 **Webmaster (NexeraCET, IEDCCET, AeroCET):** Directed technical infrastructure and database optimization, streamlining platform deliveries for major college events.
- Ongoing **Open Source & AI Ecosystem:** 3,000+ GitHub contributions and continuous experimentation with cutting-edge ML frameworks and custom architectures.
